

iNKT cytotoxicity and Gene Ontology

Paper-guided analysis on the latest local data | 19 September 2026

15,532 cells | 10,670 measured genes

PAGER: gene modules and temporal profiles

3 tissues | Ctrl and T2 | 9 refined clusters

GAFA: cluster-specific GO enrichment

Primary contrasts: tissue x original cluster

Sensitivity: stable tissue reclustering + QC matching

Exploratory transcriptional results; one sample label per tissue x condition; no animal-level inference.
