

Material, dataset and QC

Six samples • 15,532 retained cells • 10,670 measured genes

Sample	Input cells	Retained
Ctrl_Thymus	2101	1372
Ctrl_BM	3998	3379
Ctrl_Spleen	3829	3422
T2_Thymus	1639	1257
T2_BM	3131	2731
T2_Spleen	3760	3371

Gene min_cells = 100, then
 $200 \leq \text{detected genes} < 2,500$; mitochondrial fraction $< 5\%$.

QC counts match the legacy deck; downstream UMAP, Leiden and gene statistics remain a reanalysis.
