

# E Paper pathways: C6 / Thy

Single enrichment-score columns with actual driver genes; all 17 reference pathways remain visible

|                                        | Paper NK           |  | Our iNKT         |  | Our T2-up overlapping genes |
|----------------------------------------|--------------------|--|------------------|--|-----------------------------|
| Hematopoietic cell lineage             | <div></div> * 23.5 |  | <div></div> -0.0 |  | —                           |
| Antigen processing and presentation    | <div></div> * 13.8 |  | <div></div> 1.4  |  | Hspa1a, Hspa1b              |
| Type I diabetes mellitus               | <div></div> * 11.7 |  | <div></div> -0.0 |  | —                           |
| Cytokine-cytokine receptor interaction | <div></div> * 11.5 |  | <div></div> 0.2  |  | Ccr4                        |
| Toxoplasmosis                          | <div></div> * 11.4 |  | <div></div> 1.0  |  | Hspa1a, Hspa1b              |
| Rheumatoid arthritis                   | <div></div> * 10.8 |  | <div></div> -0.0 |  | —                           |
| Graft-versus-host disease              | <div></div> * 10.3 |  | <div></div> -0.0 |  | —                           |
| Asthma                                 | <div></div> * 10.3 |  | <div></div> -0.0 |  | —                           |
| Th17 cell differentiation              | <div></div> * 9.7  |  | <div></div> -0.0 |  | —                           |
| IL-17 signaling pathway                | <div></div> * 7.4  |  | <div></div> -0.0 |  | —                           |
| Autoimmune thyroid disease             | <div></div> * 6.3  |  | <div></div> -0.0 |  | —                           |
| NF-kappa B signaling pathway           | <div></div> * 5.9  |  | <div></div> -0.0 |  | —                           |
| Osteoclast differentiation             | <div></div> * 5.8  |  | <div></div> -0.0 |  | —                           |
| Cell adhesion molecules                | <div></div> * 5.7  |  | <div></div> 0.5  |  | Pecam1                      |
| Measles                                | <div></div> * 5.5  |  | <div></div> 1.3  |  | Cd46, Hspa1a, Hspa1b        |
| Systemic lupus erythematosus           | <div></div> 5.2    |  | <div></div> -0.0 |  | —                           |
| JAK-STAT signaling pathway             | <div></div> 4.9    |  | <div></div> -0.0 |  | —                           |

Score =  $-\ln(\text{nominal enrichment } P)$ , verified against Table S3; \* pathway BH FDR  $\leq 0.05$ . Scale does not remove method/library differences.
