

Functional groups mapped back to tissue and cell clusters

Genes can contribute to several groups: columns must not be summed. A dash means no significant BP-term evidence.

- G01 Mixed annotations / stress; inspect drivers
- G02 Translation / ribosome biogenesis
- G03 Shared ribosomal annotations; not muscle identity
- G04 Respiration / ATP production
- G05 Respiratory-chain assembly
- G06 Nucleotide metabolism / overlapping energy genes
- G07 Ion / proton transport
