

97 GO BP nodes; 577 shared-gene edges

Seven exploratory GNN + semantic groups

Edges represent overlapping measured gene sets, not regulation or causality. Group G01 is heterogeneous.

G01: Mixed annotations / stress; inspect drivers  
G02: Translation / ribosome biogenesis  
G03: Shared ribosomal annotations; not muscle identity  
G04: Respiration / ATP production  
G05: Respiratory-chain assembly  
G06: Nucleotide metabolism / overlapping energy genes  
G07: Ion / proton transport
